Basic information on procurement

Procurement name

Phasor data collector system

Procurement identification

539928

Procurement description

This tender is for upgrading Fingrid's Phasor Data Collector (PDC) system.

The initial scope of the system will include:

- Connecting approximately 100 Phasor Monitoring Units (PMUs) from Fingrid's substations and neighboring countries to a control center environment using IEEE C37.118:2011.
- Integrating with a PI historian for measurement data archival.
- Integrating with a Wide Area Monitoring System for data visualization and analysis.
- Implementing redundant PDCs for main communications.
- Establishing separate PDC instances for calculations and connections to external stakeholders.

Service support shall include (for example, via email or a ticketing system during business hours):

- Installation and system integration support.
- Maintenance support.

Details of the support contract will be defined in further discussions.
